

kira2je .

*An AI-powered financial advisor for Malaysian F&B SMEs
— delivering ERP-level insights without the cost or
complexity.*

UM Hackathon 2026 | Group 55 - My Garden Is On Fire

THE STORY

We built the wrong thing first.

An honest pivot

We designed a tool for mak ciks and roadside vendors — then talked to someone who actually works with F&B businesses. We realized, 32 hours ago, we had to change everything.

Original Idea

We designed a tool for street vendors and roadside sellers — we thought that was the gap.

Real Feedback

"Your features already exist in POS systems. And the mak ciks are too small to worry about data analysis" — our neighbour in the F&B industry.

Revenue is digital. Expenses are still on paper.

Sales: Fully Digital

Small F&B businesses already use POS systems - sales data is structured, digital, and exportable.

Expenses: Still Analogue

Expenses are calculated from physical invoices and paper receipts.

The Gap Nobody Fills

ERPs like SAP and Odoo cost thousands and require full migration. Hiring an accountant would cost the same. These businesses are forced to operate with limited data.

*"Most small F&B owners can tell you their daily revenue. **Almost none can tell you their actual profit margin.**"*

Not street vendors. Not big chains. **Just in the middle.**

We narrowed our target. Our user is the owner of a café with 10–30 menu items, a POS terminal, and a stack of supplier invoices they deal with by hand.

Who We're Building For

Our User: Small F&B businesses with POS systems — restaurants, cafés, catering businesses. Digitised enough to export sales data, but not sophisticated enough to analyse it.

Market Size: Over 100,000 registered F&B establishments in Malaysia. The majority are SMEs. Most use POS systems like StoreHub or Loyverse but have no analytics beyond basic sales reports.

What They Do Today: Export POS data they cannot analyse. Stack invoices in a drawer. Guesstimate margins. Hope for the best.

What They Need: The intelligence without the infrastructure — ERP-level insight at SME price and complexity.

100K+

F&B Establishments

Registered F&B SMEs in Malaysia, the majority using POS systems today

RMO

Analytics Access

What most of them pay for margin intelligence — because nothing affordable exists

Tools That Connect

Solutions bridging POS revenue data with supplier invoice expense data for this segment

Show us what you already have. We'll show you what it means.

POS Data Upload

Export your .xlsx from StoreHub or Loyverse. "Here's what I sold."

Invoice Scanning

Camera snap, drag-and-drop, or WhatsApp. "Here's what I spent."

OpenAI GPT-4o-mini Engine

Maps ingredients to menu items, calculates true margins, detects trends. "Here's what it means."

The owner keeps their POS. They keep their invoices. They just share the outputs — and Kira2 je does the thinking they can't do themselves.

	2018	Management and General	Fundraising	Total Expenses
Senior Housing	\$ 1,636,726	\$ 2,162,856	\$ 147,256	\$ 4,434,132
Senior Centers	\$ 482,784	\$ 221,716	\$ 22,885	\$ 1,160,697
	\$ 1,050,829	\$ 6,143	\$ 17,008	\$ 1,079,776
	\$ 354,431	\$ 301,572	\$ 3,919	\$ 923,491
	\$ 596,482	\$ 4,526	\$ 1,140	\$ 790,026
		\$ 3,362		\$ 748,069
		\$ 32,911		\$ 448,520
		\$ 209,530		\$ 296,292
		\$ 149,213		\$ 227,512
		\$ 53,077		\$ 113,400
			\$ 14,590	\$ 110,614
				\$ 104,882
				\$ 87,470
				\$ 53,617
				\$ 930

THE INTELLIGENCE LAYER

The AI doesn't just summarise. It reasons.

Four GPT-4o-mini Capabilities — Each With a Real Example

1

Ingredient-to-Menu Mapping

"20kg chicken breast from Supplier X" → infers nasi ayam, chicken chop, chicken rice. You confirm once. Next month, it remembers.

2

True Margin Analysis

Your nasi lemak sells at RM 5.50. After ingredient cost, Grab commission, and packaging — you actually keep **RM 1.82 per plate**.

3

Trend Detection

Supplier X raised chicken prices 12% over 3 months. Your chicken dishes lost RM 380 in margin. You didn't notice because revenue stayed flat.

4

Cannibalization Detection

You added Salted Egg Chicken Rice in March. Regular Chicken Rice dropped 23%. The new item is cannibalising — not adding — category revenue.

Remove the AI model and you just have numbers in a spreadsheet. The model is what turns data into decisions — and it gets smarter every month.

How it works — live product

1. Dashboard

Monthly status overview with summary cards, trend arrows, and the GLM insight banner highlighting your biggest margin opportunity.

2. Invoice Submission

Camera snap, drag-and-drop, or WhatsApp photo. OCR reads the invoice and asks you to confirm in seconds.

3. Ingredient Mapping

Drag-and-drop to link ingredients to menu items. This is the moment that always gets a reaction. Month two is nearly automatic.

4. GPT-4o-mini Analysis Report

Prose summary written by the GLM, top performers ranked by profit (not revenue), and ranked RM-impact recommendations. Includes What-if simulator.

Upload POS Export

StoreHub / Loyverse .xlsx

Scan Invoices

Camera, drag-drop, or WhatsApp

Confirm Mappings

One-time drag-and-drop setup

Read Your Report

GLM prose + ranked actions

The longer they use it, **the smarter it gets.**

A one-time analysis tool is easy to replace. Kira2 je becomes more valuable over time — mappings get automatic, trends get deeper, and cannibalization detection is impossible without sustained use.

The Retention Loop

Month 1

Owner uploads first POS data and scans invoices. Confirms ingredient mappings. Gets first margin analysis.

"Oh, I'm only making RM 1.82 on nasi lemak?"

Month 3+

Cannibalization detection activates. Owner sees which new menu items are stealing from best sellers.

"That new item isn't growing revenue — it's stealing from my best seller."

Month 2

System remembers mappings — confirmation is faster. Trend view unlocks. Supplier price changes become visible.

"My chicken costs went up 8% and I didn't notice."

WhatsApp Invoice Flow

The owner is already on WhatsApp all day. Sending an invoice photo to a bot is easier than filing it in a drawer. That's the habit driver.

Monthly POS Upload

One export per month. Each month's report is richer than the last. The data compounds into deeper intelligence.

Exclusive Insights

The owner cannot get cannibalization detection, true per-item margins, or supplier trend analysis anywhere else at this price point.

Real impact, **real ringgit.**

These are businesses currently one or two bad months away from closing. Better margin visibility directly reduces that risk — and the numbers are concrete.

For the Business Owner

A typical small café misprices 3–5 menu items, leaving money on the table every single month.

- Menu mispricing: **RM 300–800/month** left on the table
- Undetected supplier increases: **RM 200–500/month** eroded
- Estimated recovery: **RM 500–1,300/month** per business
- Annual recovered profit: **RM 6,000–15,600/year**

Ecosystem Impact

5% adoption = 5,000 businesses × RM 6K–15.6K/year = **RM 30–78M/year** in recovered SME profit across Malaysia

Technical Efficiency

~130K–160K tokens/month per business (optimisable to ~50K–70K with dedicated OCR). Under 5 MB stored data/month. Scalable and lightweight.

WHAT'S NEXT

Where Kira2 Je goes from here.

Three Horizons

1

Now — Hackathon MVP

Working prototype: POS upload, invoice OCR, ingredient mapping, GLM analysis with two report views, and what-if simulator. Supports StoreHub, Loyverse, plus custom column mapping.

2

Next 6 Months

WhatsApp bot in production. Support for Square, iMin, and more POS systems. Multi-outlet support for small chains (2–5 branches). Supplier comparison recommendations.

3

Long-Term Vision

The financial intelligence layer for SME F&B across Southeast Asia. Expand beyond F&B to retail and services. Partner with POS providers for native integration.

We Listen & Adapt

We pivoted from a flawed assumption to a validated gap because we talked to real operators. That's how we'll keep building.

We Turn Receipts into Decisions

Every invoice photo, every POS export becomes a sharper understanding of the business that owns it.

We Empower the Middle

Not street vendors. Not big chains. The 100,000+ Malaysian F&B SMEs who deserve ERP-level intelligence — without ERP-level cost.

"You don't need to change how you run your business. You just need to show us what you already have, and we'll show you what it means."
